1. Apptha User Article

User Article is a Joomla Extension that allows registered users of joomla to create an article in the front-end. This will also displays the list of the articles created. This component provides an editor to add the content to an article. User can also edit,delete and view their article. Administrator will receive the notification for each creation and modification of article.

2. Tech Specification

- Compatible with Joomla Community Edition 1.6, 1.7 & 2.5

3. General Features

- User can create Article from front end
- User can Edit and Delete article front end
- Logged in users only can Post Article
- If user added or edited the article, Administrator will receive mail
- Admin only have to publish the User article
- Multi Language Support
- Script can be easily customized based on your needs.

4. Installation Steps

Once you download the User Article extension.

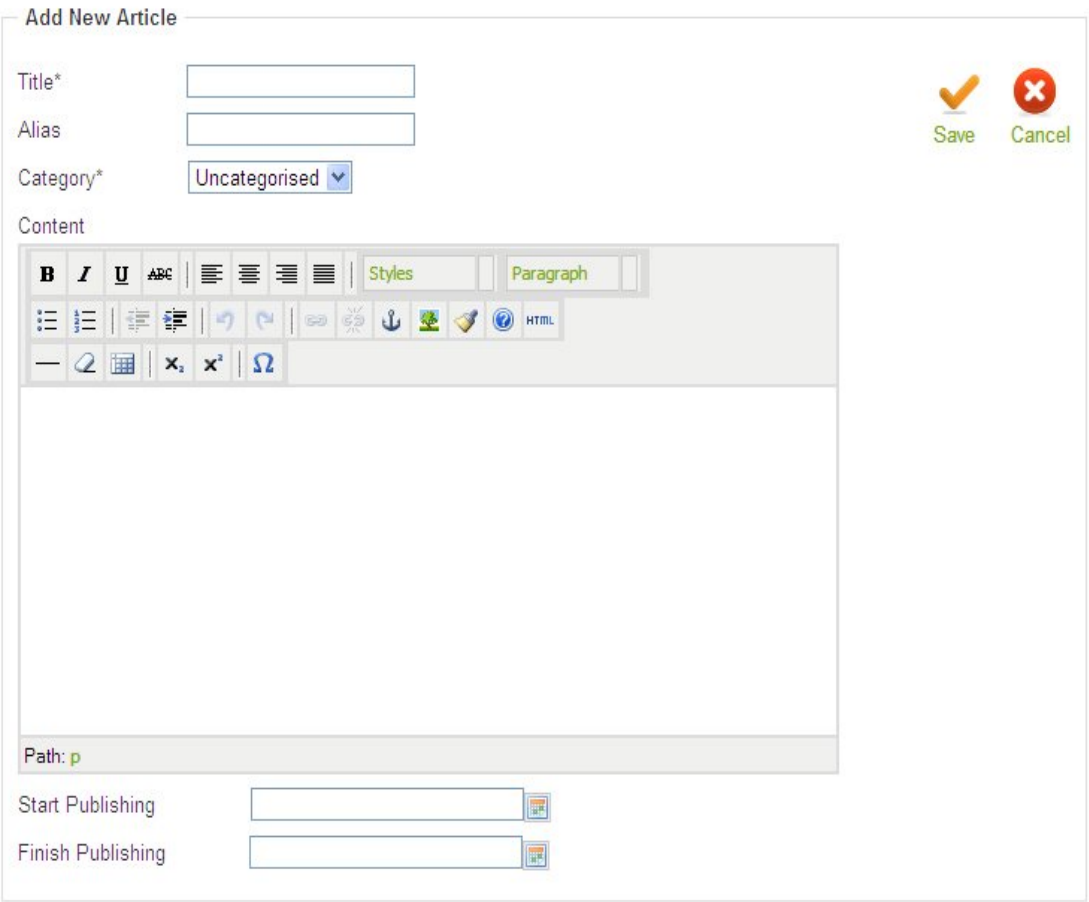
Step 1: Log on to Joomla Administration page.

Step 2: Go to **Extensions -> Extension Manager -> Choose file**

Step 3: Select the component downloaded and click **Upload File** and install the component file initially. After Component Installation, assign user article Component in a menu
Assign Position for User Article Module

Step: 4 In Front End, Login with username and password. To use Userarticle , Click userarticle module that you have enabled before.

Step: 5 To add New Article ,click on the Add new Article Icon. Fill the content in your favorite style and save it. You can also select Start and End Date from Calendar for publishing. This is similar to the creation of article in the back-end. After saving the article, admin will receive a mail requesting to publish the article.



The admin can publish the article in the back-end by verifying its content. Users can see the list of created articles . To Edit an Article Click .**Edit Icon** in Action Column. To Delete an Article Click **Delete Icon** in Action Column.
